

List of figures

Figure 1.1. Stylized representation of Two-Phase Convergence Process in the NMS, EU-15 and the US since the beginning of transition in 1989.....	10
Figure 1.2. Contribution of ICT capital to labour productivity growth versus average GDP per person employed (EU-15=100), 1995-2003	14
Figure 2.1. Average rates of economic growth and GERD, 1997-2005.....	30
Figure 2.2. Average rates of economic growth and of GERD changes, 1997-2005.....	31
Figure 2.3. Knowledge Economy Index, 2006, EU members (except Malta)....	33
Figure 2.4. Average GDP growth in 1986-95 and KEI for 1995.....	34
Figure 2.5. Average GDP growth in 1996-2005 and KEI for 2005.....	34
Figure 2.6. Average growth in 1986-95 with KEI 1995 and growth in 1996-2005 with KEI 2005	35
Figure 2.7. Change of KEI in period 1995-2005 and change of 10-year average growth rates, 128 countries.....	36
Figure 2.8. Increase of KEI in period 1995-2005 and increase of average growth rates, 10 most advanced in KEI countries.....	38
Figure 2.9. Average pace of growth and average growth rates of investment in knowledge	38
Figure 2.10. Average pace of growth and growth of investment in knowledge in 1994-2002.....	39
Figure 3.1. R&D spending over the 1995-2005 period decomposed into groups by sector of performance.....	48
Figure 3.2. Annual GDP per capita growth	49
Figure 6.1. Evolution of the FP budget (€ million, 2004 prices)	93
Figure 6.2. Share of the European Union's budget dedicated to research (%)....	93
Figure 6.3. Evolution of the FP priorities	94
Figure 6.4. Collaborative links between northern and southern European countries.....	101
Figure 7.1. Share of GERD on GDP in the Slovak Republic in 1989-2005.....	111
Figure 7.2. Research and development personnel	112
Figure 7.3. Applications concerning inventions according to the international patent classifications	112
Figure 8.1. Major players of the Hungarian national innovation system.....	131
Figure 9.1. Possible future cone	152
Figure 9.2. Three main tendencies of foresight occurrence and development .	156
Figure 9.3. Model of the Foresight Process	159

Figure 9.4. Potential key beneficiaries of foresight according to the fields of research	160
Figure 9.5. Methodical Balance Triangle in foresight process	161
Figure 10.1. Lisbon Review – ICT and innovation dimensions	182
Figure 10.2. Lisbon Review – ICT and innovation dimensions in EU countries, 2006	183
Figure 10.3. EU members in terms of knowledge economy index value	185
Figure 10.4. The relation between the knowledge and institutional quality indexes in 1995 and 2005.....	187
Figure 10.5. Innovation performance and human resource quality, 2005	188
Figure 10.6. Indicators of economic performance and efficiency	190
Figure 10.7. Indicators of governance and equality of opportunities	190
Figure 10.8. Innovation performance indicators.....	191
Figure 10.9. Indicators of human resource quality	192
Figure 10.10. ICT infrastructure indicators	193
Figure 11.1. Share of foreign students, 2003 (in %).....	200
Figure 11.2. Educational mobility between the 25-29 and 60-64 age groups (2005, in %).....	201
Figure 11.3. Participation of adults in life-long learning (%).....	205
Figure 11.4. Share of adult population at the two highest levels of literacy (1998, in %).....	208
Figure 11.5. Internet use by age group (2005, in %)	210
Figure 11.6. Flexibility and adaptability of people in the economy (points)....	211
Figure 11.7. Share of population willing to move to get a job in the event of unemployment (2005, %).....	212
Figure 12.1. Spatial pattern of web design and hosting companies in Poland..	221
Figure 12.2. Spatial pattern of internet shops in Poland.....	223
Figure 12.3. Spatial pattern of e-business in Poland.....	224
Figure 13.1. Development of the R&D capacities in Slovak regions 1970-1985.....	231
Figure 13.2. Space-economy of Slovakia	233
Figure 13.3. Regional support infrastructure in Slovakia (2006)	234
Figure 13.4. Innovation disparities and regional innovation typology in Slovakia (2004)	237
Figure 14.1. Clusters of organization modes in terms of factor analysis (EU-4)	254
Figure 14.2. Indicators of organization modes in EU-4 and EU-15 (averages, in % of labour force).....	256
Figure 14.3. Organization modes in industries in EU-4 (in % of industry labour)	257
Figure 14.4. Organization modes in occupations in EU-4 (in % of labour).....	258

Figure 14.5. Organization modes in EU-15 and EU-4 (in % of labour force)..	260
Figure 14.6. Typology of innovators (% of companies).....	263
Figure 14.7. Relation between strategic innovativeness and discrete learning.	264
Figure 14.8. Nature of competitiveness in EU-27 countries, 2001, 2006.....	266
Figure 14.9. Relation between discretionary decision making and competitiveness	266
Figure 15.1. Fixed assets by kind of activity “Manufacture of machinery and equipment”	287
Figure 15.2. Fixed assets by kind of activity “Manufacture of motor vehicles, trailers and semi-trailers, other transport equipment”	287
Figure 16.1. Imports by technology intensity in the CR (2003, in bn. CZK) ...	301
Figure 16.2. Determinants of foreign investment in R&D (2005, % of respondents)	306
Figure 17.1. Structure of R&D expenditures in 2005 of the surveyed companies.....	322
Figure 17.2. Structure of R&D financing of the surveyed companies in 2005	323
Figure 17.3. R&D intensity of the most R&D investing companies from Poland, EU and the U.S. by sector in 2005	324
Figure 17.4. Sectoral composition of most R&D investing companies from Poland, EU and the U.S.....	325
Figure 18.1. Interpretation of “innovation” in enterprises.....	335
Figure 18.2. The declared areas of innovative activity in examined entities....	336
Figure 18.3. Effects of implementing innovation in last three years in examined enterprises	337
Figure 18.4. Bodies responsible for innovativeness in examined subjects.....	337
Figure 18.5. Main sources of innovative changes in examined entities	338
Figure 18.6. Barriers of innovative activity in examined enterprises	339
